

WHAT'S KILLING CANADIANS

We recently pulled this interesting article from the CBC News Indepth website on their Health and Science link!

Heart Disease... about 8 out of every 10 Canadians are at risk of developing cardiovascular disease - an illness that 74,000 die from each year.

Stroke... more than 300,000 Canadians are living with the effects of a stroke. There are more than 40,000 strokes in Canada each year - about 16,000 of these prove fatal.

Lung Cancer... every year, about 21,000 new cases of lung cancer are diagnosed. At least 18,000 die of the disease, making it the most deadly form of cancer and the country's number 2 killer.

These statistics mean there's a good chance you know someone who has had lung cancer, cardiovascular disease or a stroke - or may one day be affected by one of them.

Protect Yourself Or A Loved One.... Look at Critical Illness Insurance Coverage!

This type of insurance provides a one-time lump sum benefit tax-free if diagnosed with one of up to 25 life-threatening illnesses.

We urge you to contact us for more information!
